**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reese et al (Pub. No.: 2002/0141732) and further in view of Kim (Pub. No.: 2001/00310463).

Art Unit: 2614

Regarding claim 1, Reese teaches a digital video recorder [may read on DVRC-1, see Fig. 1] connected through a network or the Internet or is configured for voice communication [see Fig. 1, Ethernet network via Ethernet switch 410] between the digital video recorder [DVCR-1, see 0020] and a remote workstation [may read on another DVR or a computer, see 0016], wherein: the digital video recorder or remote workstation has a Windows or Linux operating system installed [this can read on the software installed that allows the DVRC to operate, see 0012]; each DVRC is actually connected to another DVRC by or can be connected to a camera 310 via 232 USB ports [Fig. 2 and 0015-0016]; and operations of pushing key pad buttons [reads on external control keyboard 212, see Fig. 1 and 0021].

Reese does not specifically teach the use of having an Internet phone, which is configured for voice communication among a plurality of remotely located digital video recorders.

However, KIM teaches the use of an Internet phone in order to provide inexpensive network connection and apparatus [see 0017]. The claimed "speaker" as recited in claim 1, reads on element 40d as shown in Fig. 2. The use of "a microphone" is inherent in Kim's system.

Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the internet phone functionalities, as taught by Kim, into the

Art Unit: 2614

Reese in order to provide services with the least cost expenses. For example, the usage of a DVRC that is connected through an Internet phone is not the same as if the DVRC was connected to a regular PSTN wiring. The use of Internet is more economical.

Claims 5, 7-8 and 11-14 are rejected for the same reasons as discussed above with respect to claim 1.

Regarding claims 2-4 and 15-19, the use of the claimed "sensor" is extremely obvious and well known in the art.

Claim 6 limitations are obvious and it is considered a design choice. Obviously one of ordinary skill in the art may choose to display an address directory and/or an IP address window based on the need and desire.

Claim 9 recites "the first digital video recorder is coupled to a video camera". This reads on DVRC is connected to camera 310, see Fig. 1 [0015].

Claim 10 recites "the video camera is a surveillance video camera". See [0004].

Claim 20 is rejected for the same reasons as discussed above with respect to claims 1 and 2, respectively.
